Even a complete observation of the 3G or 2G rule does not rule out the possibility that persons present are infectious. Neither rapid antigen tests nor PCR tests protect against possible corona infection. Vaccination against SARS-CoV-2 coronavirus provides good protection against infection and is highly effective against severe courses of COVID-19. It is still possible, however, for vaccinated individuals to become infected with and pass on coronavirus despite vaccination, although the risk is greatly reduced.

As of 11/03/2021

* Warning level: The warning level is declared if the hospitalization rate reaches or exceeds the value of 8.0 for five consecutive working days or the utilization of intensive care beds in Baden- Württemberg reaches or exceeds the value of 250 for two consecutive working days.
 ** Alarm level: The alarm level is declared if the hospitalization rate reaches or exceeds the value of 12.0 for five consecutive working days or the utilization of intensive care beds in Baden- Württemberg reaches or exceeds the value of 390 for two consecutive working days.
